

# Tube Watch for Revolution Apex Platform

Reduce disruptions. Enhance care.

We understand that unplanned downtime may create significant disruptions on your schedule and impact patient care.

## We can help

Tube Watch is an AI based and digital twin technology that remotely monitors your system 24/7.

Tube Watch sends alerts, and predicts when potential tube and x-ray chain failures may happen and thus, gives enough time before failures happen.

Tube Watch enables parts planning and service scheduling at your most convenient time, avoiding the risk of your system being down before and during examinations.

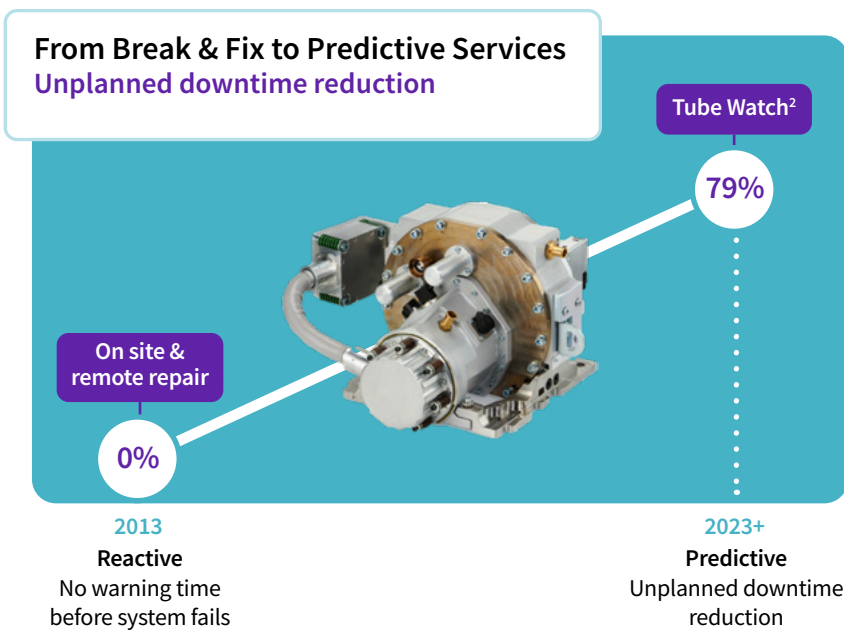

Unforeseen tube or x-ray generation chain failures are causing an average of

75

canceled examinations<sup>1</sup>

## Innovative technologies that help predict and prevent failures on Revolution Apex Platform

### Key outcomes

**Financial stability**  
Maintains exam revenue

**Staff peace of mind**  
Avoids disruption to patient care

**Patient quality of care**  
Supports on time diagnosis

**In-house engineers' empowerment**  
Helps to address issues proactively

<sup>1</sup> Based on the avg # of procedures collected on ~370 systems globally through iCenter™ utilization on a weekly basis and assuming they have been performed within 5 days in '23. All results are computed based on measured average for downtime, scan loss and events by year.

<sup>2</sup> Calculation is based on the avg downtime generated by a CT Revolution APEX for a tube or x-ray generation chain failure vs the average planned labor time. Percentage noted is based on various assumptions, including but not limited to the use of Tube Watch consistent with the Tube Watch terms and conditions, timely receipt of the tube-health notice, parts and labor availability, immediate access to customer's equipment. As each hospital is unique, results may vary. GE HealthCare does not guarantee the results identified herein.
